Note: If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. CONVEYOR RETURN OIL VARIABLE RATE PRE-WETTING SYSTEM:
The following specification will describe a calcium chloride pre-wetting system. This system shall be mounted on the snow and ice control vehicle to allow operators to apply liquids directly on to granular material without over spray on the truck and equipment. The system is to be powered by the return oil from the conveyor line of the hydraulic system. The system utilizes a hydraulic proportional flow control valve, which allows the driver to select variable rates that were preset on the controller. Calcium chloride output shall be between 0.6 gpm and 9.0 gpm.

The pre-wetting system will have a self-contained power pack, assembled with weather resistant components and anti-seize applied to all fasteners. Weatherproof enclosure is manufactured of stainless steel material with heavy duty mounting brackets.

The proportional valve assembly will divert between 0% to 100% of hydraulic oil to the motor allowing for pinpoint rate adjustment. System output will give a liquid to granular rate depending on application and vehicle speed. The system incorporates a gear pump which has good wearing properties, for worry free use. It is a fixed displacement pump, which has been coated to resist corrosion and chemicals. Low material output will be monitored via the controller, which will give an audible and visual warning to the driver. There shall also be installed a relief valve into the output of the pump in order to protect the lines and pump against clogging of nozzles and system failures. The prewet system will be activated and controlled via a third and integrated knob on the spreader controller.
